# FCC Part22H&24E Test Report

Product Name: Module

Model No. : SIM5320A

FCC ID : UDV-1103022011008

Applicant: Shanghai Simcom Ltd.

Address: Building A, SIM Technology Building, No. 633, Jinzhong

Road, Changning Disdrict, Shanghai P.R. China 200335

Date of Receipt: Feb. 16, 2011

Test Date : Feb. 16, 2011 ~ Feb. 21, 2011

Issued Date : Feb. 22, 2011

Report No. : 112S009R-HP-US-P07V01

Report Version: V 3.0

The test results relate only to the samples tested.

The test results shown in the test report are traceable to the national/international standard through the calibration of the equipment and evaluated measurement uncertainty herein.

This report must not be used to claim product endorsement by TAF, NVLAP, NIST or any agency of the Government.

The test report shall not be reproduced except in full without the written approval of QuieTek Corporation.

# **Test Report Certification**

Issued Date: Feb. 22, 2011

Report No.: 112S009R-HP-US-P07V01

QuieTek

Product Name : Module

Applicant : Shanghai Simcom Ltd.

Address : Building A, SIM Technology Building, No. 633, Jinzhong

Road, Changning Disdrict, Shanghai P.R. China 200335

Manufacturer : Shanghai Simcom Ltd.

Address : Building A, SIM Technology Building, No. 633, Jinzhong

Road, Changning Disdrict, Shanghai P.R. China 200335

Model No. : SIM5320A

FCC ID : UDV-1103022011008

EUT Voltage : 3.7V/3.4V/4.2V

Trade Name : SIMCom

Applicable Standard : FCC CFR Title 47 Part 2,TIA/EIA 603-C

FCC Part22 Subpart H, FCC Part24 Subpart E

Test Result : Complied

Performed Location : Suzhou EMC Laboratory

No.99 Hongye Rd., Suzhou Industrial Park Loufeng Hi-Tech

Development Zone., Suzhou, China

#### **Laboratory Information**

We, **QuieTek Corporation**, are an independent EMC and safety consultancy that was established the whole facility in our laboratories. The test facility has been accredited/accepted(audited or listed) by the following related bodies in compliance with ISO 17025, EN 45001 and specified testing scope:

Taiwan R.O.C. : BSMI, NCC, TAF

Germany : TUV Rheinland

Norway : Nemko, DNV USA : FCC, NVLAP

Japan : VCCI

The related certificate for our laboratories about the test site and management system can be downloaded from QuieTek Corporation's Web Site: <a href="http://www.quietek.com/tw/ctg/cts/accreditations.htm">http://www.quietek.com/tw/ctg/cts/accreditations.htm</a>
The address and introduction of QuieTek Corporation's laboratories can be founded in our Web site: <a href="http://www.quietek.com/">http://www.quietek.com/</a>

| Mode              | WCDMA R99<br>HSDPA R5 | Band                 | UL Frequency (MHz) | DL Frequency (MHz) |  |  |  |
|                   |                       | II                   | 1850~1910          | 1930~1990          |  |  |  |
|                   |                       | V                    | 824~849            | 869~894            |  |  |  |
| Channel Control   |                       | Auto                 |                    |                    |  |  |  |
| Antenna Peak Gain |                       | 1.83dBi for GSM850;  |                    |                    |  |  |  |
|                   |                       | -2.14dBi for PCS1900 |                    |                    |  |  |  |

## 1.2. Mode of Operation

QuieTek has verified the construction and function in typical operation. All the test modes were carried out with the EUT in normal operation, which was shown in this test report and defined as:

| Test Mode                  |
|----------------------------|
| Mode 1: GSM850 GPRS Link   |
| Mode 2: PCS1900 GPRS Link  |
| Mode 3: GSM850 EDGE Link   |
| Mode 4: PCS1900 EDGE Link  |
| Mode 5: WCDMA Band II Link |
| Mode 6: WCDMA Band V Link  |
| Mode 7: HSDPA Band II Link |
| Mode 8: HSDPA Band V Link  |

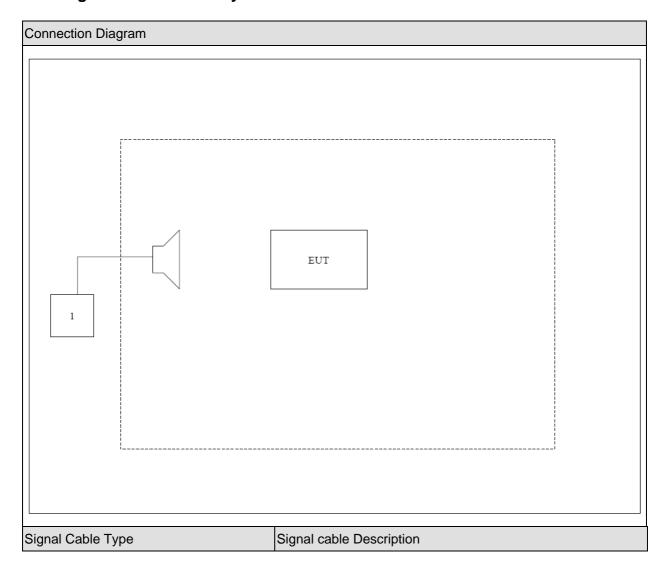

## 1.3. Tested System Details

The types for all equipments, plus descriptions of all cables used in the tested system (including inserted cards) are:

| Product  | Manufacturer | Model No. | Serial No. | Power Cord |
|----------|--------------|-----------|------------|------------|
| 1 CMU200 | R&S          | CMU200    | N/A        | N/A        |

# 1.4. Configuration of Tested System

# 1.5. EUT Exercise Software

| 1 | Setup the EUT and simulators as shown on above.           |
|---|---|
| 2 | Turn on the power of all equipment.                       |
| 3 | EUT Communicate with CMU200, then select channel to test. |

Page: 10 of 77

## 2. Technical Test

# 2.1. Summary of Test Result

| $\boxtimes$ | No deviations from the test standards                    |
|-------------|--|
|             | Deviations from the test standards as below description: |

#### For GSM850, and WCDMA Band V (FCC Part 22H & Part 2)

| Performed Item               | Section in CFR 47              | Test Performed | Deviation |
|------------------------------|--------------------------------|----------------|-----------|
| Peak Output Power            | FCC Part 22.913(a)(2) and Part | Yes            | No        |
|                              | 2.1046                         |                |           |
| Modulation Characteristic    | FCC Part 2.1047(d)             | Yes            | No        |
| Occupied Bandwidth           | FCC Part 2.1049                | Yes            | No        |
| Spurious Emission At Antenna | FCC Part 22.917(a) and Part    | Yes            | No        |
| Terminals (+/- 1MHz)         | 2.1049                         |                |           |
| Spurious Emission            | FCC Part 22.917(b) and Part    | Yes            | No        |
|                              | 2.1051, 2.1053                 |                |           |
| Frequency Stability Under    | FCC Part 22.355 and 2.1055     | Yes            | No        |
| Temperature & Voltage        |                                |                |           |
| Variations                   |                                |                |           |

## For PCS1900, and WCDMA Band II (FCC Part 24E & Part 2)

| Performed Item               | Section in CFR 47           | Test Performed | Deviation |
|------------------------------|-----------------------------|----------------|-----------|
| Peak Output Power            | FCC Part 24.232(b) and Part | Yes            | No        |
|                              | 2.1046                      |                |           |
| Modulation Characteristic    | FCC Part 2.1047(d)          | Yes            | No        |
| Occupied Bandwidth           | FCC Part 24.238(b) and Part | Yes            | No        |
|                              | 2.1049                      |                |           |
| Spurious Emission At Antenna | FCC Part 24.238(a) and Part | Yes            | No        |
| Terminals (+/- 1MHz)         | 2.1049                      |                |           |
| Spurious Emission            | FCC Part 24.238(b) and Part | Yes            | No        |
|                              | 2.1051, 2.1053              |                |           |
| Frequency Stability Under    | FCC Part 24.235 and 2.1055  | Yes            | No        |
| Temperature & Voltage        |                             |                |           |
| Variations                   |                             |                |           |

#### 3.2. Test Setup

Conducted Power Measurement:

Radiated Power Measurement:

#### 3.3. Limit

#### For FCC Part 22.913(a)(2):

The ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts.

#### For FCC Part 24.232(b):

The EIRP of mobile transmitters and auxiliary test transmitters must not exceed 2 Watts.

#### 3.4. Test Procedure

#### **Conducted Power Measurement:**

- a) Place the EUT on a bench and set it in transmitting mode.
- b) Connect a low loss RF cable from the antenna port to a spectrum analyzer and CMU200 by a Directional Couple.
- c) EUT Communicate with CMU200, then selects a channel for testing.
- d) Add a correction factor to the display of spectrum, and then test.

#### **Radiated Power Measurement:**

- e) The EUT shall be placed at the specified height on a support, and in the position closest to normal use as declared by provider.
- f) The test antenna shall be oriented initially for vertical polarization and shall be chosen to correspond to the frequency of the transmitter
- g) The output of the test antenna shall be connected to the measuring receiver.
- h) The transmitter shall be switched on and the measuring receiver shall be tuned to the frequency of the transmitter under test.
- The test antenna shall be raised and lowered through the specified range of height until a maximum signal level is detected by the measuring receiver.
- j) The transmitter shall then be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
- k) The test antenna shall be raised and lowered again through the specified range of height until a maximum signal level is detected by the measuring receiver.
- I) The maximum signal level detected by the measuring receiver shall be noted.
- m) The transmitter shall be replaced by a substitution antenna.
- n) The substitution antenna shall be orientated for vertical polarization and the length of the substitution antenna shall be adjusted to correspond to the frequency of the transmitter.
- o) The substitution antenna shall be connected to a calibrated signal generator.
- p) If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
- q) The test antenna shall be raised and lowered through the specified range of height to ensure that the maximum signal is received.
- r) The input signal to the substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuator setting of the measuring receiver.
- s) The measurement shall be repeated with the test antenna and the substitution antenna orientated for horizontal polarization.

t) The measure of the effective radiated power is the larger of the two levels recorded at the input to the substitution antenna, corrected for gain of the substitution antenna if necessary.

#### Base station simulator settings for each test mode:

#### 1. For GSM/GPRS/EDGE

Configure R&S CMU200 to support GMSK and 8PSK call respectively, and set one timeslot transmission for GMSK GSM/GPRS and 8PSK EDGE.

Measure and record power outputs for both modulations.

#### 2. For WCDMA/HSDPA

Configure the CMU-200 to support all WCDMA tests in respect to the 3GPP 34.121. Measure the EUT output power at 826.4MHz, 836.6MHz and 846.6MHz for WCDMA Band V and 1852.4MHz, 1880MHz and 1907.6MHz for WCDMA Band II.

#### For Rel 99

- Set a Test Mode 1 loop back with a 12.2kbps Reference Measurement Channel (RMC)
- Set and send continuously Up power control commands to the Gobi2000
- Measure the power at the Gobi2000 Module antenna connector by using CMU-200.

#### For HSDPA Rel 5

- Establish a Test Mode 1 look back with both 12.2kbps RMC channel and a H-Set1 Fixed Reference Channel (FRC). With the CMU-200 this is accomplished by setting the signal Channel Coding to "Fixed Reference Channel" and configuring for HSET-1 QKSP.
- Set beta values and HSDPA settings for HSDPA Sebtest1 according to Table C.10.1.4
- Send continuously Up power control commands to the Gobi2000
- Measure the power at the Gobi2000 Module antenna connector by using CMU-200 mean power.
- The mean power shall be averaged over at least one timeslot.
- Repeat the measurement for the HSDPA Subtest2, 3 and 4 as given in Table C.10.1.4

#### 3GPP HSDPA Sub-test Setting from TS 34 121

Table C.10.1.4:  $\beta$  values for transmitter characteristics tests with HS-DPCCH

| Sub-test | βc    | $\beta_d$ | $\beta_c/\beta_d$ | βнs   | CM (dB) | MPR  |
|----------|-------|-----------|-------------------|-------|---------|------|
|          |       |           |                   |       |         | (dB) |
| 1        | 2/15  | 15/15     | 2/15              | 4/15  | 0.0     | 0.0  |
| 2        | 12/15 | 15/15     | 12/15             | 24/15 | 1.0     | 0.0  |
| 3        | 15/15 | 8/15      | 15/8              | 30/15 | 1.5     | 0.5  |
| 4        | 15/15 | 4/15      | 15/4              | 30/15 | 1.5     | 0.5  |

# 3.5. Uncertainty

The measurement uncertainty is defined as for Conducted Power Measurement  $\pm$  1.2 dB, for Radiated Power Measurement  $\pm$  3.2 dB

Page: 17 of 77

# 4.2. Test Setup

#### 4.3. Limit

N/A

### 4.4. Test Procedure

Using Occupied Bandwidth measurement function of spectrum analyzer, and setting as follows:

For GPRS/EDGE 850/1900 test --- RBW = 3 kHz and VBW = 10 kHz For WCDMA/HSDPA FDD Band II/V test --- RBW = 50 kHz and VBW = 200 kHz

## 4.5. Uncertainty

The measurement uncertainty is defined as  $\pm$  10 Hz

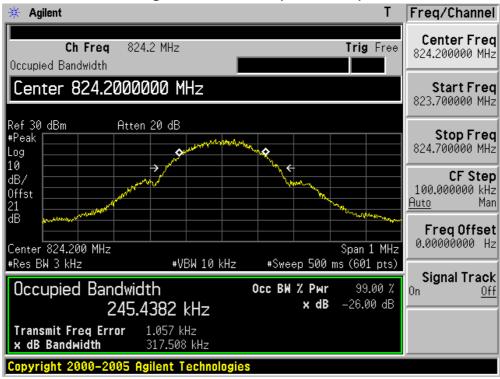

#### 4.6. Test Result

# 5.2. Test Setup

#### 5.3. Limit

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10log(P) dB.

#### 5.4. Test Procedure

In the 1MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed to measure the out of band Emissions.

### 5.5. Uncertainty

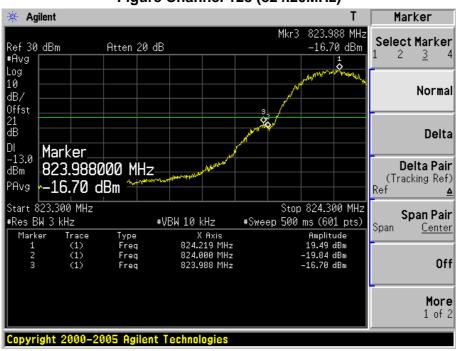

The measurement uncertainty is defined as  $\pm$  1.2 dB.

### 6.2. Test Setup

Conducted Spurious Measurement:

Radiated Spurious Measurement:

#### 6.3. Limit

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10log(P) dB.

#### 6.4. Test Procedure

#### **Conducted Spurious Measurement:**

- a) Place the EUT on a bench and set it in transmitting mode.
- b) Connect a low loss RF cable from the antenna port to a spectrum analyzer and CMU200 by a Directional Couple.
- c) EUT Communicate with CMU200, then select a channel for testing.
- d) Add a correction factor to the display of spectrum, and then test.
- e) The resolution bandwidth of the spectrum analyzer was set at 1 MHz, sufficient scans were taken to show the out of band Emission if any up to 10<sup>th</sup> harmonic.

#### **Radiated Spurious Measurement:**

- a) The EUT shall be placed at the specified height on a support, and in the position closest to normal use as declared by provider.
- b) The test antenna shall be oriented initially for vertical polarization and shall be chosen to correspond to the frequency of the transmitter
- c) The output of the test antenna shall be connected to the measuring receiver.
- d) The transmitter shall be switched on and the measuring receiver shall be tuned to the frequency of the transmitter under test.
- e) The test antenna shall be raised and lowered through the specified range of height until a maximum signal level is detected by the measuring receiver.
- f) The transmitter shall then be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
- g) The test antenna shall be raised and lowered again through the specified range of height until a maximum signal level is detected by the measuring receiver.
- u) The maximum signal level detected by the measuring receiver shall be noted.
- h) The transmitter shall be replaced by a substitution antenna.
- i) The substitution antenna shall be orientated for vertical polarization and the length of the substitution antenna shall be adjusted to correspond to the frequency of the transmitter.
- j) The substitution antenna shall be connected to a calibrated signal generator.
- k) If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
- The test antenna shall be raised and lowered through the specified range of height to ensure that the maximum signal is received.
- m) The input signal to the substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuator setting of the measuring receiver.

- n) The measurement shall be repeated with the test antenna and the substitution antenna orientated for horizontal polarization.
- The measure of the effective radiated power is the larger of the two levels recorded at the input to the substitution antenna, corrected for gain of the substitution antenna if necessary.
- p) The frequency range was checked up to 10<sup>th</sup> harmonic.

### 6.5. Uncertainty

The measurement uncertainty is defined as 3.2 dB for Radiated Power Measurement.

# 7.2. Test Setup

#### 7.3. Limit

The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block.

| Limit | < ± 2.5 ppm |
|-------|-------------|
|       |             |

### 7.4. Test Procedure

#### **Frequency Stability Under Temperature Variations:**

The equipment under test was connected to an external AC or DC power supply and input rated voltage. RF output was connected to a frequency counter or spectrum analyzer via feed through attenuators. The EUT was placed inside the temperature chamber. Set the spectrum analyzer RBW low enough to obtain the desired frequency resolution and measure EUT  $20^{\circ}$ C operating frequency as reference frequency. Turn EUT off and set the chamber temperature to  $-30^{\circ}$ C. After the temperature stabilized for approximately 30 minutes recorded the frequency. Repeat step measure with  $10^{\circ}$ C increased per stage until the highest temperature of  $+50^{\circ}$ C reached.

#### **Frequency Stability Under Voltage Variations:**

Set chamber temperature to 20°C. Use a variable AC power supply / DC power source to power the EUT and set the voltage to rated voltage. Set the spectrum analyzer RBW low enough to obtain the desired frequency resolution and recorded the frequency. Reduce the input voltage to specify extreme voltage variation (±15%) and endpoint, record the maximum frequency change.

#### 7.5. Uncertainty

The measurement uncertainty is defined as  $\pm$  10 Hz.

### 7.6. Test Result
